WEEKLY ELECTRIC OUTPUT
Essential Energy Information from EEI's Statistics Department
Volume 75 No. 3
OUTPUT FOR WEEK ENDED - Jan 20, 2007
Jan 24, 2007

The net available amount of electric energy distributed by the Total Electric Utility Industry+ for the week ended Saturday, **Jan 20, 2007** was **81,592** gigawatthours (GWh), according to the Edison Electric Institute. This is equivalent to **179** on the weekly electric output index.

Notes: EEI output data are an estimate of electricity load made available for distribution derived as weekly net generation + purchases from non-utilities + net imports - exports - sales for resale. It is not meant to be a measure of electricity generation for the U.S. EEI survey data represent the majority of national distribution (large utilities, large government power projects, some independent and large municipal power projects). The remaining segment of the industry (smaller producers) is estimated. Non-utility generation is captured via direct sales to utilities.

* Excludes Alaska and Hawaii

** Less than one-tenth of one percent

*Raw steel production tonnage included in this report is estimated based on a sampling of steel producers. Therefore, this report should be used primarily to assess production trends. The AISI production report "AIS 7," produced monthly and available by subscription, provides a more accurate summary of steel production based on data supplied by companies representing approximately 75% of U.S. production capacity.

+Includes revisions for previous months

NOTE: Capability for the Fourth Quarter 2006 is approximately 30.7 million net tons vs 30.0 million net tons for the same period last year, and 31.2 million tons for the third quarter of 2006.
