Weekly Electric Output

Volume 91 No. 5

OUTPUT FOR WEEK ENDED - Feb 04, 2023

Feb 08, 2023

The net available amount of electric energy distributed by the Total Electric Utility Industry* for the week ended Saturday, Feb 04, 2023 was **83,834** gigawatthours (GWh), according to the Edison Electric Institute. This is equivalent to **196** on the weekly electric output index.

Notes: EEI output data are an estimate of electricity load made available for distribution derived as weekly net generation + purchases from non-utilities + net imports - exports - sales for resale. It is not meant to be a measure of electricity generation for the U.S. EEI survey data represent the majority of national distribution (large utilities, large government power projects, some independent and large municipal power projects). The remaining segment of the industry (smaller producers) is estimated. Non-utility generation is captured via direct sales to utilities. Note: the year 2022 has an extra Saturday.

^{1/} Excludes Alaska and Hawaii

^{2/} Excludes New England and Pacific regions

*Raw steel production tonnage included in this report is estimated based on a sampling of steel producers (50% of domestic producers). Therefore, this report should be used primarily to assess production trends. The AISI production report "AIS 7," produced monthly and available by subscription, provides a more accurate summary of steel production based on data supplied by companies representing approximately 75% of U.S. production capacity plus includes revisions for previous months.

NOTE: Rate of capability utilization for December 2022 was approximately 70.6%.
